ACADEMIC PROJECTS

1. **Smart Academy –** Developed an academy website enabling users to register for courses, track course duration and assessments, with authentication features. Implemented certificate generation upon course completion using HTML, Bootstrap, and PHP.
2. **Air Defense System –** An embedded systems project built using Arduino IDE in C++. Designed and implemented core functionalities demonstrating hardware–software integration.

3. **Parking Space Detection –** Developed a machine learning model to identify empty and occupied parking slots, showcasing skills in computer vision and model training.
4. **Final Year Project – Mobile App –** Built a cross-platform mobile application using Dart and Flutter. Implemented features such as user authentication, real-time updates, and map integration, while gaining hands-on experience with state management, responsive UI design, and mobile development best practices.
